

## INSTRUCTIONS FOR USE OF CHORS LUMINAIRES

**NOTE: Proper operation of a luminaire requires the following guidelines to be put into practice.**

1. Any repairs, inspections, maintenance, dismantling and other activities associated with the luminaire must only be carried out by persons with the required qualifications who have read these instructions.
2. Any work carried out on the luminaire must be carried out with the power supply disconnected in the circuit to which the luminaire is connected. Each time the luminaire is cleaned, repaired, replaced or inspected, and also when replacing light sources, the condition of the luminaire fixing parts must be checked.
3. It is strictly forbidden to use the luminaire at power supply parameters other than those indicated on the product label.
4. It is strictly forbidden to load (electrically and mechanically) the luminaire with additional elements, not provided for in this manual.
5. The luminaire must be maintained in accordance with the maintenance instructions in the individual lighting installation plans.
6. If it is necessary to use a tape protecting the luminaire against plaster or paint contamination, it should be removed immediately after installation.
7. The use of tapes containing adhesives that react with lacquer coatings may lead to damage to the lacquered surfaces of the luminaires and void the guarantee. We recommend the use of tapes containing water-based adhesives with low adhesion.
8. The lacquer surface should be cleaned with a soft cloth with the power switched off. Do not use aggressive cleaning agents or solvents.
9. **ATTENTION! THE UNIT MUST NOT BE DISPOSED OF WITH HOUSEHOLD WASTE.**

The symbol placed on the product or its packaging indicates the selective collection of waste electrical and electronic equipment. This means that the product should not be disposed of with other household waste. Proper disposal of old and used electrical and electronic equipment will help to avoid potentially adverse effects on the environment and human health.
